

## **Virtual Reality (VR)**

VR-based training scenarios are used to let deputies work through dangerous situations in safety so that they can become accustomed to choosing and using these new techniques in real-life situations. We use VR for critical decision-making, judgment training and de-escalation training. Virtual reality allows us to create all those different training environments. The VR system allows deputies within a fixed location to interact with computer training videos. They do so while wearing wireless VR headsets that track their movement in 360-degree 3D immersive environments.
